

Turf Type Perennial Ryegrass

Primary

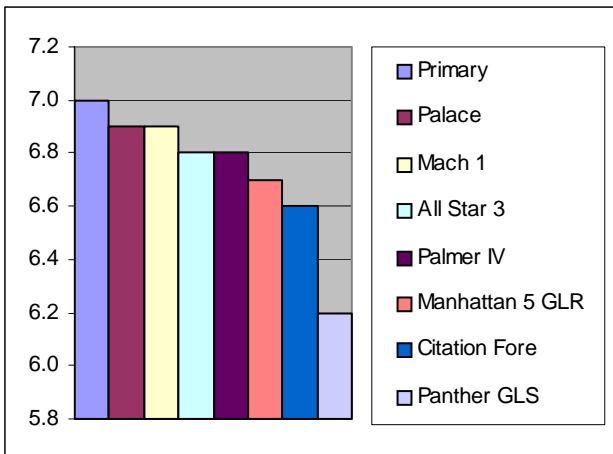

CHARACTERISTICS

Primary is a progeny collection that is broadly adapted for improved turf persistence and quality. Primary has improved heat tolerance, superior summer performance and natural resistance to a number of disease complexes.

Primary has good resistance to Gray Leaf Spot, brown blight, red thread, crown rust and brown patch. Its aggressive tillering and fine leaf texture provides a dense, quality turf. Primary is quick to green-up in the spring and has excellent spring vigor and density.

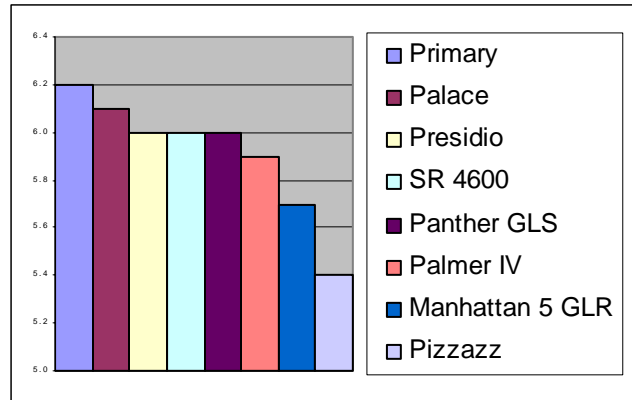

Primary's superior turf quality consistently rated it near the top for wear tolerance.

TRIAL DATA

National Turfgrass Evaluation Program
2006 Progress Report
Fall Density
Ratings 1-9, 9= Dense

TRIAL DATA

National Turfgrass Evaluation Program
2006 Progress Report
Schedule A Maintenance (Fairway Height)
Ratings 1-9, 9=Ideal Turf

SEEDING RATE

Permanent Turf: 7-8 lbs./1,000 square feet
Overseeding: 20 - 25 lbs./1,000 square feet

BENEFITS

- Excellent Resistance to Gray Leaf Spot
- Fine Leaf Texture
- Dark Green Genetic Color
- Excellent Wear Tolerance
- Great Turf Density
- Handles Close Mowing
