

Jamestown II

Chewings Fescue

FEATURES:

Jamestown II thrives in full sun as well as shade and performs best with minimal fertilization. Commonly used as a companion grass for creeping bentgrass fairway seeding, it provides a fine-textured playing surface with very good ball support. **Jamestown II** is endophyte-enhanced to protect against surface feeding insects and improve stress tolerance. Formerly produced by Lofts Seed (ABT), **Jamestown II** is now exclusively part of the Jacklin Seed product line.

PERFORMANCE CHARACTERISTICS:

- Excellent resistance to take-all patch, dollar spot, and red thread
- Dark green color
- Exceptionally winter hardy
- Germinates quickly in 7-12 days
- Persistent under low-maintenance conditions
- Very drought tolerant
- Great seedling vigor
- Can be maintained at an extremely low height of cut

Adaptation:

Jamestown II is perfect for low-maintenance sites such as golf course roughs and non-irrigated fairways. It can be used wherever cool-season grasses are adapted, and for winter overseeding of dormant bermudagrass. Experience the benefits of the variety when using perfected blends or mixtures like Shady Turf™, Surge™, Select, specialized Superintendent's Choice™, and specific Landscaper's choice.
