

# Milliken Turf Products

**Evergreen™ Green Turf Paint** is designed to cover the missing chlorophyll color of dormant or discolored grasses. Evergreen is an environmentally safe green pigment that will not harm the turf or fade from ultraviolet light. Reduced maintenance cost for winter over-seeding can be achieved by applying Evergreen to the desired color. Evergreen Green Turf Paint is recommended for use on all types of athletic fields, golf courses, municipal/industrial lawns and residential lawns.

## Application Rate

An accepted turf coverage area for one gallon of Evergreen Green Turf Paint is between 3,000 to 10,000 square feet. The recommended dilution rate is 1 part of Evergreen green turf paint to 10-15 parts of water. The coverage rate will depend upon the height and texture of the turf, the speed and setting of the spray equipment, natural turf color, or color desired.
