

Ramik[®] Brown

RODENTICIDE

Ramik Brown is a weather-resistant rodenticide for control of mice in orchards, Christmas tree plantations, newly reforested areas, shelterbelts and nurseries.

TARGET PESTS: Mice.

APPLICATIONS: Bearing and non-bearing orchards of tree fruits (stone and pome), Christmas tree plantations, newly reforested areas, shelterbelts and nurseries.

RATE: Scatter pellets at a rate of 22 kg/ha (8.9 kg/acre) in two applications of 11 kg (4.45 kg) each. This is equivalent to 140 pellets (a small handful) per 10 square meters (12 square yards) in two applications of 70 pellets each. Application can be made 20 - 40 days apart.

WATER VOLUME: Not applicable.

ACTIVITY: When swallowed, reduces the ability to clot blood, which causes bleeding. Mice may feed several times before the effects are noticed. Several days may be required for control.

TIMING: Baiting should commence in late fall just before the first snowfall. In orchards, application is not to be made until all fruit is harvested and all harvestable fruit is picked up. Do not apply later than March 31.

CAUTION: Treated area must be posted. Dogs are particularly sensitive. To minimize hazard to dogs, do not place bait in piles on the bare ground or on top of snow. Do not bait ditches, roadsides, or the edges of orchards where the public may walk their pets. Dispose of dead mice in garbage or by burying. Consult label for further recommendations and precautions.

RAINFAST: Weather-resistant.

PREHARVEST INTERVAL: Do not cut hay for bedding. Do not graze meat or dairy cattle in treated fields.

RESTRICTED ENTRY INTERVAL: Not applicable.

PACKAGE SIZES: 20 kg.

QUICK SHEET

ALWAYS READ THE LABEL BEFORE USE

RESIDUAL CONTROL: Repeat application as needed, according to pest re-infestations and label recommendations.

ADDITIONAL: The treated area should be investigated during thaw periods, during the winter and immediately after the snow has disappeared. The area should be rebaited if there is evidence of new damage on the trunk.

SURFACTANT NEEDED: Not applicable.

ACTIVE INGREDIENT: Diphacinone 0.005%.

STORAGE: Keep away from humans, domestic animals and pets. Store in a secure area away from feed and food.
